Applelec Illuminated Snap Frames

Product Brochure

Bright, even illumination, with a super slim profile

Delivering bright, even illumination with no spotting or dark patches, with Applelec's super slim, Illuminated Snap Frames.

Slim depth:

A bespoke illuminated snap frame created with a slim 25mm depth profile that features powerful backlighting from Applelec LED Light Sheet.

Bespoke design:

Designed to enhance the appearance of translucent graphics, Applelec Illuminated Snap Frames are available in bespoke dimensions up to a maximum size of 3000x1000mm, for eye-catching and striking displays.

Made in Britain:

With the entire unit, including the Applelec LED Light Sheet panel manufactured at our West Yorkshire premises, we can provide quick turnaround times for single or multiple bespoke projects.

Finish options:

Ideal for internal or external applications with IP67 rating available, Applelec Illuminated Snap Frames can be created with a silver anodised coating, paint options, as well as finished with a bright polish for sophisticated design scheme.

Made to bespoke specification

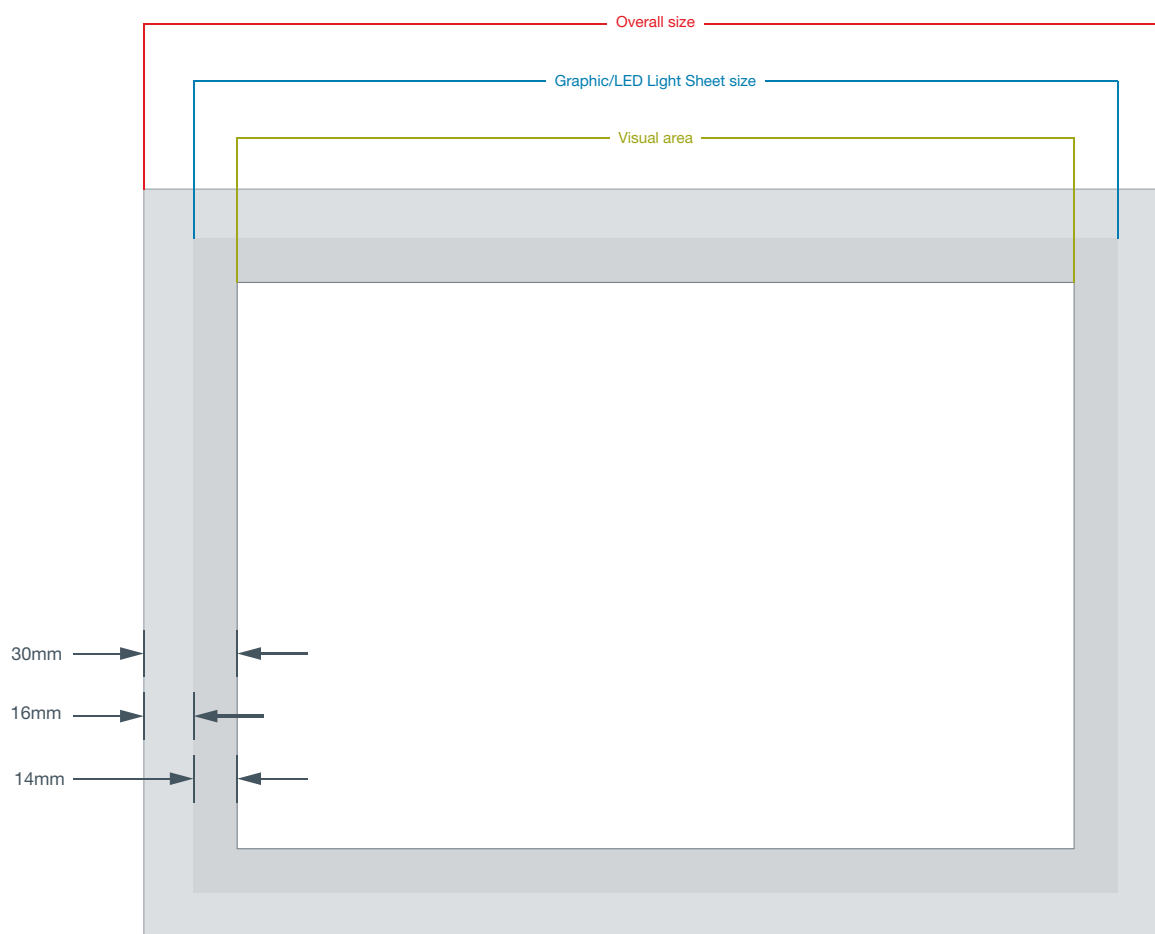

Construction

Dimensions

The following measurements should be used to calculate the required external frame size and graphic. Please note the resulting graphic visual area when designing and sizing artwork.

Finishes

Silver anodised

Standard frame finish

Painted

Satin, matt or gloss

Bright Polished

Hand finished to a high gloss shine

Fixings

LED Light Sheet Snap Frames can be fixed using a variety of methods. For wall mounted frames, drilling through the largest part of the extrusion enables the frame to be fitted flush to a surface. Please note that the number of holes required may vary according to the size of the frame with 500mm intervals recommended for larger frames. Pre-drilled holes are possible under consultation with the Applelec sales team.

Dependent on frame weight, suspended and floor-to-ceiling fixing systems are possible using Applelec's Premium INOX fixings. Each fixing can accommodate a maximum of 10 kilos and can be secured to the corner of the frame. In all instances it is recommended that fixing solutions are discussed with an Applelec sales advisor prior to use and where required customer testing is undertaken.
